

Case Study

Multinational Crew Recruited
for Subsea Installation

Marine

About Marine.

With a focus on the offshore marine environment, our client operates vessels designed for subsea installation and construction activities.

Project background.

Our client was involved in a subsea infrastructure, umbilicals, risers and flowlines (SURF) project.

The project required the deployment of the client's flagship vessel, as well as subcontracted vessels, to lay underwater pipelines, flowlines and umbilicals.

Challenge.

The client required crew management and logistical support, as well as recruitment of the entire construction crew onboard their flagship vessel, while ensuring compliance with industry standards (medical, visa, certificates).

Solution.

WRS assessed the client's requirements and delivered a bespoke and dedicated team of experienced consultants to implement the planning structure required and coordinate all their crewing needs.

Thanks to our extensive network of qualified and vetted personnel, we were able to place highly-skilled multinational crews for three vessels.

WRS also provided complete management of travel arrangements, visa support and crew payroll.

Result.

As an ISO-accredited service provider, WRS provided the expertise and resources the client needed to complete their contract.

Thanks to our experience in providing offshore and onshore solutions, we supported our client in delivering their project successfully.

About Worldwide Recruitment Solutions (WRS).

WRS supports the needs of the international energy, maritime, mining, technology and commodities industries, providing the best pre-qualified candidates right when you need them.

We're an award-winning global workforce solutions provider with offices in Europe, the Middle East, APAC and the Americas. In short, we find talent that others can't.

We employ specialist sector consultants who help you to identify the expatriate and local personnel you need to keep your business moving.

Whether it's a one-off permanent placement for a remote site, or a fully-staffed managed service project for several cross-continental offshore projects, WRS will find the right fit to help your business achieve its goals.
